

Helping You Simplify the Product Selection Process

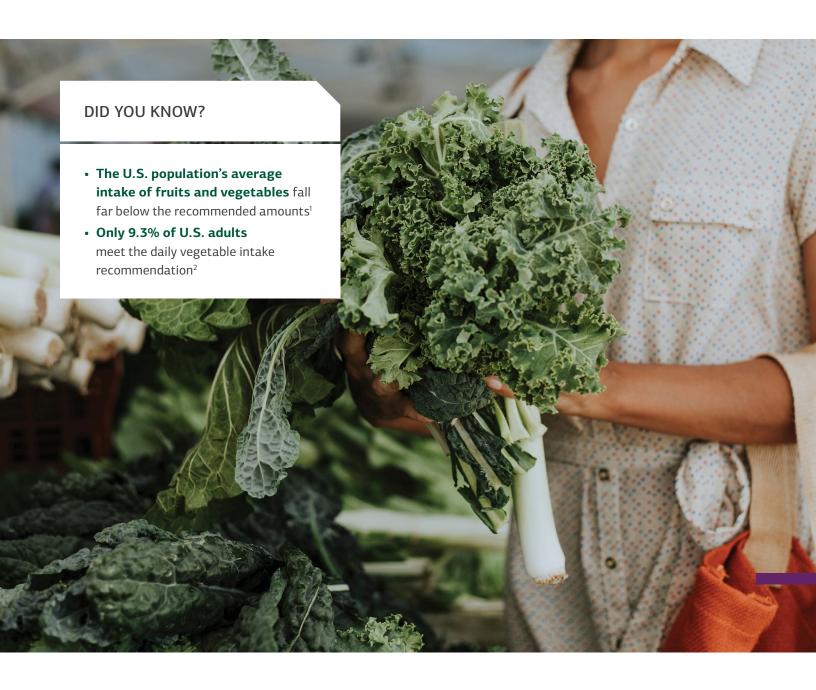

When the Diet Falls Short, General Wellness Supplements Can Step Up

Busier lives may mean more meals on the go, and less-thanideal nutrition. Fortunately, helping your patients improve their nutrition doesn't have to be difficult.

When you recommend Standard Process® and MediHerb® supplements, you are giving your patients a shortcut to

overcoming a number of nutritional shortfalls. They're easy, effective ways to get a variety of the essential vitamins and minerals that the body needs.

When we work together, we can change lives.

A High Risk of Nutrient Deficiency

In the United States, average fruit and vegetable intake falls far below the recommended amounts. Approximately 88 percent of U.S. adults fall short of consuming the recommended amount of daily fruit, while nearly 91 percent do not meet the recommendation for daily vegetable intake.^{1,2}

In addition to not consuming enough healthy fruits and vegetables, Americans are also not eating an adequate variety of fruits and vegetables.³ Consuming a diversity of fruits and vegetables can provide a wide array of beneficial nutrients and phytonutrients, and has been associated with higher intakes of micronutrients and nutrient adequacy.^{1,4,5}

Conversely, not consuming enough fruits and vegetables can lead to a lack of:

ANTIOXIDANTS

Vitamin A supports antioxidant activity to protect against free radicals and promote healthy cell functions. ⁶⁻⁸ Vitamin A is also involved in immune function and the normal formation and maintenance of vital organs such as the heart and lungs. ⁶⁻⁸

VITAMIN D

Individuals with inadequate sun exposure are at risk of vitamin D deficiency.⁹ Vitamin D is a fat soluble vitamin that supports bone health and development, cellular function, neuromuscular function, and immune function.^{8,10}

B VITAMINS

B vitamins are vital cofactors for hundreds of biological functions in the body. They include:

- Thiamin (vitamin B₁) acts as a co-enzyme associated with the metabolism of carbohydrates and amino acids.¹¹
- Riboflavin (vitamin B_2) is converted to its coenzyme forms in most tissues which are involved in many enzymatic reactions in the body including energy production, cellular functions, growth, and development.⁶
- **Vitamin B**₆ in coenzyme forms are involved in more than 100 enzymatic reactions in the body including the synthesis of heme in the red blood cells and neurotransmitters, and the metabolism of carbohydrates and lipids. 6,8

PHYTONUTRIENTS

Phytonutrients are natural, plant-derived compounds that are reported to be beneficial to human health.
