# Year-Round Immune System Support Is Your Best Defense

---

We often think of the immune system only when we are experiencing a challenge. The best defense, however, is to support the immune system every day, all year long. By doing so, your body will be well-equipped to take on continuous pressure from seasonal stress, environmental pollution, poor eating habits, lack of sleep and exercise, and more.

## Short-Term Support

For short-term support, you can arm your body's defenses with vitamins and minerals. Calcium Lactate is important to take every day, but especially important when anticipating or experiencing immune system challenges. Vitamins A and C are also critical for immune system health.\*

## Long-Term Support

Arm your body daily with the nutrients it needs to maintain a strong; healthy immune system. Research-supported ingredients like EpiCor®; maitake and turkey tail mushrooms; zinc; calcium; and vitamins A, C, and E are good choices to help maintain your immune system.\*

## Gut Health

About 70 percent of your immune system is in your gut. The gut is home to rich and complex immune system tissue that gets a first "taste" at potential invaders coming through the gastrointestinal (GI) tract. Probiotic strains can support the body's natural immune system function by modulating gut flora and promoting overall intestinal health.\*

EpiCor® is a registered trademark of International Nutrition Company BV, Loosdrecht, the Netherlands.

## Personalized Support

Talk with your health care professional about which Standard Process products are right for you. Our products include whole food and other ingredients that are prepared in a way that safeguards their nutritional value. These highly complex combinations contain a variety of elements designed to trigger the trophic effects that support the body's healthy balance and wellness.\*
